Summary

A B.Tech in AI/ML (2027), with experience in building full-stack applications using React, Next.js, Node.js, and PostgreSQL, as well as experience in working with large language models APIs without resorting to speculative answers. Open to entering the realm of technology consulting.

Education

2023 – 2027 **Manipal University Jaipur** – B.Tech in Artificial Intelligence and Machine Learning

Professional Experience

ISRO (Spark India Program) – Space Science Outreach & ML Research Intern Aug 2025 – Aug 2026

Machine Learning, Simulation Data, Science Communication

- Constructed an ML model for predicting rocket thrust based on simulations and scientific data.
- Taught rocketry, satellites, and launch technologies at various organizations.
- Conveyed space concepts through practical means to inspire interest in STEM and space exploration.

Projects

Distributor Management Platform GitHub | Demo

Next.js, React.js, Node.js, PostgreSQL, Vercel

- Developed a full stack platform which enables the shopkeepers to make orders from the distributors without having to visit them.
- Developed responsive dashboards for product management as well as order placement and tracking.
- PostgreSQL is used for databases, and Vercel is used for deployment.

AI Spend Audit GitHub | Demo

Next.js, TypeScript, Neon Postgres, Anthropic API, Vercel

- Created a web application that analyzes a startup's usage of AI subscriptions (Cursor, Claude, ChatGPT, Copilot, Gemini), indicating where the subscription cost is too high.
- Each audit report is stored on Neon Postgres with a shareable URL, and the Anthropic API generates the summary.
- Email notifications added with Resend.

Internship Studio 2.0 – RAG Resume-to-Job Matcher GitHub | Demo

Next.js, pgvector, Neon Postgres, Claude API

- Replace the TF-IDF resume matching system with one based on RAG that performs matching based on semantics.
- A TF-IDF based resume matching algorithm has been replaced by a RAG matching pipeline, which matches based on meaning.
- Restricted Claude's responses to information found, relying on templates where necessary to avoid hallucinations.

NavPal (CampusNav) – Indoor Navigation PWA GitHub

Next.js 14, MongoDB, React-Konva, SVG, QR Anchors

- Developed indoor navigation PWA application for Manipal University Jaipur which utilizes QR codes as anchors to calculate location and Dijkstra's algorithm to calculate route.
- Made a map editor with SVG viewBox, MapSession, and Zustand persist plugin. Syncs automatically every 30 seconds. "My Maps" dashboard for managing campus maps. At the moment, it is pending approval for implementation across the campus.

Technical Skills

Languages:	C++, Python , C#
Frontend:	React.js, Next.js, TypeScript
Backend & Databases:	Node.js, SQL (PostgreSQL, Neon Postgres), API integration
AI/ML:	Machine Learning, Retrieval-Augmented Generation (RAG), Semantic Search, Claude API, Anthropic API
Tools & Deployment:	GitHub, cloud deployment on Vercel

Leadership and Extracurriculars

Music Club MUJ – Active Participant 2023 – 2025

Awards

Student Excellence Award (3x) – and one of them because of their internship at ISRO from Spark India Program
